A History of Metaheuristics - NASA/ADS

Nowadays, we are immersed in tens of newly-proposed evolutionary and swam-intelligence metaheuristics, which makes it very difficult to choose a proper one to be applied on a specific optimization problem at hand. On the other hand, most of these metaheuristics are nothing but slightly modified variants of the basic metaheuristics. For example, Differential Evolution (DE) or Shuffled Frog ...

Metaheuristics may make few assumptions about the optimization problem being solved, and so they may be usable for a variety of problems. [3] Compared to optimization algorithms and iterative methods , metaheuristics do not guarantee that a globally optimal solution can be found on some

We consider a recently introduced class of network construction problems where edges of a transportation network need to be constructed by a server (construction crew). The server has a constant construction speed which is much lower than its travel speed, so relocation times are negligible with respect to construction times. It is required to find a construction schedule that minimizes a non ...
