Classification And Regression Trees

And Regression Tree (CART) analysis is an umbrella term used to refer to both of the above procedures, first introduced by Breiman et al. in 1984. Trees used for regression and trees used for classification have some similarities - but also some differences, such as the procedure used to determine where to split.

Classification And

Regression Trees

learning - Wikipedia

Both the practical and theoretical sides have been developed in the authors' study of tree methods. Classification and Regression Trees reflects these two sides, covering the use of trees as a data analysis method, and in a more mathematical framework, proving some of their fundamental properties.

Classification and Regression Trees - 1st Edition - Leo ...

To predict the classification or regression based on the tree (Mdl) and the new data, enter. $Y_{new} = \text{predict}(Mdl, X_{new})$
For each row of data in X_{new} , predict runs through the decisions in Mdl and gives the resulting prediction in the corresponding element of Y_{new} .
