Dictionary Java Programming

Dictionary is an abstract class that
represents a key/value storage
repository and operates much like Map.
Given a key and value, you can store the
value in a Dictionary object. Once the
value is stored, you can retrieve it by
using its key.

Java is a high-level, class-based, object-oriented programming language that is designed to have as few implementation dependencies as possible. It is a general-purpose programming language intended to let programmers write once, run anywhere (WORA), meaning that compiled Java code can run on all platforms that support Java without the need for recompilation.

Java (programming language) - Wikipedia

Dictionary can be implemented using binary search tree. A binary search tree is a binary tree such that each node stores a key of a dictionary. Key 'k' of a node is always greater than the keys present in its left sub tree. Similarly, key 'k' of a node is always lesser than the keys present in its right sub tree.
