Turned the engine off and started it back up. No light. So after continuing on my way the light came back on and I noticed that some fan or humming noise started right with the light. So long story short, my coolant temp sensor, and coolant thermometer went bad, and somehow made the computer think something about the ETC.

If using a 1982 or newer V6, you will have to use the 1977-81 carburetor to make the engine run correctly without the computer. If you have a 1975-77 odd-fire 231, you can use the regular point type distributor from the earlier 225 V6 in place of the self-contained unit, if desired. The HEI unit is better and there is little reason to not use it.
