Demolding time: is the amount of time after which you can remove the cured resin from its mold. The demolding time is important if you want to pop the resin jewelry out of its mold in order to reuse the mold again without waiting for the piece to completely cure. Cure time: amount of time it takes the resin to completely cure. If your resin is ...

What are the different types of resin? - Resin Obsession

This type of mold reduces imperfections in the casting which can cause air bubbles to form and pock marks to develop on the surface. The density of the casting coupled with a stress relieving process (600°F for 8 hours) bakes out any moisture in the casting, ensuring a warp free surface that is unaffected by transfer temperatures.
