Model Assisted Survey Sampling 2nd

Statistical modeling has strongly influenced sampling theory in recent years and has clarified many issues related to the uses of auxiliary information in surveys. This is the first textbook that systematically extends traditional sampling theory with the aid of a modern model assisted outlook.

Sampling (statistics) - Wikipedia

In statistics, survey sampling describes the process of selecting a sample of elements from a target population to conduct a survey. The term "survey" may refer to many different types or techniques of observation. In survey sampling it most often involves a questionnaire used to measure the characteristics and/or attitudes of people. Different ways of contacting members of a sample once they ...

However, we propose an estimator based on the model-assisted estimator of t_i (i.e.,) instead of the HT estimator , based solely on the second-stage field sample as suggested by Särndal et al. (1992, p. 326). The second term in eq. A8 is estimated with (as usual), and the first two terms are then simultaneously estimated by (A10)

The functional form of a quasi-random response model is assumed to be known, its parameter values estimated implicitly through the creation of calibration weights. Unfortunately, calibration depends upon known benchmark totals while the covariates in a plausible model for survey response may not be the benchmark covariates.
