In this article I'll share an RMAN script to backup the entire Oracle database including archived redo logs to disk using compression. Before looking into the script see my notes below: – Read about Oracle Recovery Manager (RMAN) concepts – Script should work for Oracle 10g and 11g. 12c

Oracle RMAN full backup script to disk with compression ...

Question: When I do a basic RMAN backup, the backup pieces are put into the /u02/instancename directory, not the directory referenced by my db_recovery_file_dest parameter. How do I find and change my RMAN backup file location destination? Answer: See my important notes on db_recovery_file_dest. The db_recovery_file_dest defines the location of the Flash Recovery Area (FRA).

RMAN backup location tips - Oracle Consulting, Oracle ...

By default, RMAN also checks for corrupt blocks during backup. In later versions of Oracle, RMAN can be used to repair corrupted blocks in the database. Backup and Recovery SLA. The DBA team must draft a backup and recovery SLA, covering details of backup procedures and including a timeline for recovery, and have management sign off on it.

Lower costs with high-performance consolidation. Oracle Hardware lowers the cost of running an organization's on-premises workloads by reducing the number of systems required, delivering higher performance for every Oracle Database software license employed, and reducing IT staff workloads.

Hardware | Oracle

Oracle Database uses the checkpoint position, which guarantees that every committed change with an SCN lower than the checkpoint SCN is saved on disk. Oracle Database applies undo blocks to roll back uncommitted changes in data blocks that were written before the failure or introduced during cache recovery.

Oracle Database Instance

Oracle System Identifier (SID) The system identifier (SID) is a unique name for an Oracle database instance on a specific host. On UNIX and Linux, Oracle Database uses the SID and Oracle home values to create a key to shared memory. Also, the SID is used by default to locate the parameter file, which is used to locate relevant files such as the database control files.
