The Magic is to use the Joule Thief circuit as the Primary of the Transformer. The magnetic flux induced by the pulsing Joule Thief leads-out electron motion energy as predicted. Some of this lead-out energy is transmitted to the Secondary. Thus we can demonstrate overunity easily with our two oscilloscopes.

A transformer is a passive electrical device that transfers electrical energy from one electrical circuit to another, or multiple circuits.A varying current in any one coil of the transformer produces a varying magnetic flux in the transformer's core, which induces a varying electromotive force across any other coils wound around the same core. . Electrical energy can be transferred between ...
