Peripheral nerve injury arising in anaesthesia practice

A nerve block is a form of regional anesthesia. Peripheral nerve blocks (PNBs) entail the injection of corticosteroids, local anesthetics, neurolytic agents and/or sclerosing agents into or near peripheral nerves resulting in the temporary interruption of conduction of impulses in peripheral nerves or nerve trunks (somatic and sympathetic nerves).

Clinical Policy Bulletin: Peripheral Nerve Blocks

Similarly, the risk-benefit ratio of analgesic peripheral nerve blocks and fascial plane blocks should be evaluated on a case-by-case basis. If the block is performed under general anaesthesia and requires repositioning of the patient, there is a risk of tracheal tube disconnection or dislodgement.
