Triple Helix: Gene, Organism, and Environment: Lewontin ...

The subtitle of the book is "gene, organism, and environment", hence, the "triple helix". In the first three essays Lewontin gives a downbeat narrative of the failings and over-stated promise of the reductionist method in biology, which has typically focused on genomic data and the metaphor of an organism as a machine programmed by DNA.

Rejecting the notion that genes determine the organism, which then adapts to the environment, he explains that organisms, influenced in their development by their circumstances, in turn create, modify, and choose the environment in which they live. The Triple Helix is vintage Lewontin: brilliant, eloquent, passionate, and deeply critical. But it is neither a manifesto for a radical new methodology nor a brief for a new theory.

Triple-stranded DNA (also known as H-DNA or Triplex-DNA) is a DNA structure in which three oligonucleotides wind around each other and form a triple helix. In triple-stranded DNA, the third strand binds to a B-form DNA (via Watson-Crick base-pairing) double helix by forming Hoogsteen base pairs or reversed Hoogsteen hydrogen bonds.
