Vertebrate Palaeontology

Vertebrate palaeontology is the subfield of paleontology that seeks to discover, through the study of fossilized remains, the behavior, reproduction and appearance of extinct animals with vertebrae or a notochord. It also tries to connect, by using the evolutionary timeline, the animals of the past and their modern-day relatives. The fossil record shows aspects of the meandering evolutionary path from early aquatic vertebrates to mammals, with a host of transitional fossils, though ...

Vertebrate Palaeontology. Michael J. Benton. Benton does a fine job with the actual subject matter of vertebrate paleontology per se, but his introduction and analysis as to how fossils are formed, and under what conditions,leaves a lot to be desired. He oversells the evolutionary angle with rampant,unsupported speculation and theory, completely ...
