When a caliper pin siezes up, the outer brake pad ceases to function on that wheel. You are left with all the work being done by the inner brake pad, which wears at an accelerated rate. This also puts excessive stress on that wheel bearing cause it's the only thing left resisting the caliper pistons force. Great writeup nonetheless...

Rebadging in the automotive industry is  
a form of market segmentation used by  
automobile manufacturers around the  
world. To allow for product  
differentiation without designing or  
engineering a new model or brand (at  
high cost or risk), a manufacturer  
creates a distinct automobile by  
applying a new badge or trademark
