cars use synchronizers, or synchros, to eliminate the need for double-clutching. A synchro's purpose is to allow the collar and the gear to make frictional contact before the dog teeth make contact. This lets the collar and the gear synchronize their speeds before the teeth need to engage, like this:

manual transmissions is the clutch disc, which is sandwiched between the transmission and the engine. To switch gears, the driver must release this clutch disc using another pedal, which is located to the left of the brake. You must release the clutch, pick the gear you want and then re-engage the clutch.
